

STATE OF HAWAII
DEPARTMENT OF EDUCATION
KA 'OIHANA HO'ONA'AUAO
P.O. BOX 2360
HONOLULU, HAWAII 96804

OFFICE OF THE DEPUTY SUPERINTENDENT OF OPERATIONS

March 7, 2024

TO: The Honorable Ken Kuraya
Chairperson, Finance and Infrastructure Committee

FROM: Curt T. Otaguro
Deputy Superintendent of Operations 

SUBJECT: Update on Status of Schools' Fire Alarm Systems

1. EXECUTIVE SUMMARY

Since the Finance and Infrastructure Committee (FIC) meeting update on February 8, 2024, the Hawaii State Department of Education (Department) accomplished key tasks aligned with the Strategic Plan Goal 3.1.2. This goal focuses on ensuring that our school facility systems are responsive, efficient, and capable of addressing all needs promptly.

- The Department has developed a plan to address the aging school fire alarm systems. Each school has its uniqueness and the Department's strategy needs to migrate from a reactionary approach to a proactive asset management model.
- The Department has updated its inventory of fire alarm systems and equipment across 258 Department schools and six charter schools and will maintain and update this database to ensure that we make data-driven decisions regarding repair and maintenance, upgrades, and safety measures.
- The Department has met with several fire chiefs from Maui and Honolulu counties over the past few months and will solicit feedback to strengthen the working relationship with them. Additional discussions with other county fire departments will also be scheduled. The discussions to date have been helpful and insightful as we continue to revise our processes.

2. DESCRIPTION

The following summary represents the current status on the Department's Fire Safety Plan and up-to-date fire alarm system information.

3. UPDATE

Fire Alarm Replacement Plan

By adopting a systematic approach to fire alarm replacements and implementing a proactive strategy, the Department will effectively address the critical infrastructure needs for our schools based on priority. This revised approach ensures the safety and security of students and staff while optimizing resource allocation and long-term planning.

1. Repair Inoperable Fire Alarm Systems

- Immediately execute repairs or replacements of critical components to restore operable status of fire alarm systems.
- Establish a service level agreement for fire alarm system repairs to minimize schools having to implement an interim Fire Watch Plan (FWP) while their systems are being repaired. FWPs are mandated by local county fire departments if a fire alarm system remains inoperable for four hours or more.
- If fire alarm system critical component repairs extend beyond four hours, the restoration of the system must be completed within three months.
- Because of supply chain limitations, the Department plans to procure and have a working inventory of critical components to facilitate timely repairs and minimize system downtime.

2. Fire Alarm Systems Replacement

- Prioritize fire alarm systems for replacement based on end-of-life reliability and operational performance. Because fire alarm systems have a lifespan between 15-20 years, the Department will assess and assign priority levels ranging from 1 (High) to 4 (Lowest) based on equipment discontinued status and/or obsolescence.
- Forecast the total cost of replacement and timing of the fire system replacements and submit a budget request annually to the Governor and ultimately the Legislature to ensure that this plan has sustained and adequate funding.
- Seek options or opportunities to expedite the fire alarm system replacement process.
- Identify potential roadblocks or obstacles that could impede the replacement plan. Engage with relevant key stakeholders to mitigate these challenges and ensure an effective and sustained implementation annually.

3. Optimize System Performance - Proactive Management

- Utilize a facilities asset management system to centralize monitoring and maintenance of fire alarm systems, proactive and preventive upkeep, regularly scheduled inspections, and timely repairs to enhance reliability and minimize downtime.
- Track the status, location, and lifecycle of fire alarm components, ensuring availability of necessary parts for repairs or replacements, thus streamlining inventory management and minimizing operational disruptions.
- Establish a predictive maintenance plan and optimize resource allocations for improved efficiency and cost-effectiveness. Leverage data-driven decision making through system performance and work order submissions requiring constant repairs to the system over time.
- Maintain compliance with regulatory standards by documenting maintenance activities, inspection reports, and adherence to relevant codes, mitigating the risk of non-compliance penalties and ensuring system integrity.
- Establish regular maintenance schedules through service contracts to ensure timely and consistent fire alarm system inspections, testing, and maintenance based on manufacturer's best practices and regulatory requirements.
- Outline procedures for timely emergency response to system malfunctions or faults, guaranteeing prompt troubleshooting, repairs, and restoration of functionality to minimize disruptions and ensure continuous protection.
- Define key performance indicators and service level agreements to measure service provider effectiveness, ensuring accountability and continuous improvement in system performance and service delivery.

4. School Fire Alarm Inventory

Since the last FIC meeting on February 8, 2024, the Department has completed its initiative to inventory fire alarm systems and equipment across all 258 Department schools and six charter schools for a total of 264 schools. As of March 1, 2024:

- Fifteen (15) schools or 5.7% are currently on a FWP due to inoperable fire alarm systems.
 - The Department has active projects to restore fire alarm systems promptly and ensure they are operational. Replacements are in various phases of pre-design, design, permitting and/or construction.
- Two hundred forty-seven (247) schools or 94.3% have operable fire alarm systems. As outlined in the fire alarm replacement plan, the Department is verifying the status of systems deemed obsolete or discontinued. Two schools, King Kamehameha III Elementary School and Niihau School are not included in the total.

- Obsolete typically refers to equipment or components that are no longer manufactured or supported by the manufacturer. These could be older models that have been replaced by newer technology or have reached the end of their lifecycle.
- Discontinued means that a particular model or line of fire alarm systems is no longer being produced by the manufacturer. This could be due to various reasons such as upgrades to newer models, changes in regulations, or market demand shifts. However, discontinued products may still have some support available, such as spare parts or limited technical assistance, depending on the manufacturer's policies.
- The Department's past practice has been to maintain fiscal prudence by leveraging spare parts from suppliers to extend the life of the existing fire alarm system. This practice may continue based on data trends on past performance but system replacements will still be recommended based on end-of-useful life systems.

The attached list summarizes all schools and current system priority statuses from 1 (High) to 4 (Lowest). Future updates will reflect the ongoing changes with the condition of the school's individual fire alarm systems as their equipment continues to be replaced or experience operational failures. The Department remains committed to ensure all schools have operational and functional fire alarm systems.
